PROFESSIONAL SUMMARY

Software Engineer with 3 years of experience designing, building, and operating large-scale, distributed backend systems at Oracle. Led end-to-end development and operations of migration and validation services for OCI MARS, a tier-0 internal artifact platform that underpins CI/CD and security patching for billion-scale datasets. Focused on data integrity, automated remediation workflows, high-availability services, observability (Grafana), and production reliability in cloud-native environments. Strong in Java, Spring boot, C++, Node.js, Mongo db, Python, SQL, distributed systems, RESTful APIs, microservices, kafka and end-to-end problem solving across the software development lifecycle.

EDUCATION

National Institute of Technology Jaipur

Computer Science and Engineering Bachelor's of Technology
CGPA: 8.13/10

Rajasthan
August 2019 - May 2023

EXPERIENCE

Oracle | Member of Technical Staff

Bengaluru, India | June 2023 - May 2026

• Migration Service:

- Led end-to-end migration of large-scale artifact repositories from Artifactory (JFrog) to internal MARS, successfully processing 1B+ Docker artifacts and 11M+ generic artifacts with 99% data integrity and zero critical outages.
- Designed and optimized high-performance SQL queries for billion-scale datasets, reducing average query latency from 120s to 15s and cutting compute cost by ~25%.

• Validation Service:

- Built a scalable migration validation system ensuring consistency between Artifactory and MARS, validating 1B+ records and improving data correctness from 99% to 99.99%.
- Developed automated self-healing remediation workflows resolving migration inconsistencies, automatically fixing ~5M validation failures and reducing manual effort by 90%.
- Reduced MTTR for migration-related incidents from 45 minutes to 10 minutes by building Grafana dashboards, runbooks, and internal operational tools that enabled faster triage and diagnosis.
- Identified and resolved 10+ production issues and security vulnerabilities (e.g., database connection leaks, API functionality, security patching) before they impacted CI/CD pipelines, improving platform reliability.

GAP Inc | Software Engineer Intern

Hyderabad, India | June 2022 - August 2022

- Designed 15+ Splunk dashboards tracking 50+ schedules and processes for the Product Augmentation team, reducing MTTR by enabling real-time anomaly detection.
- Built a proof-of-concept for New Relic Java agent installation on 5 microservices, boosting application-level observability by capturing 90% of custom metrics like thread pool usage and API latency.

TECHNICAL SKILLS AND INTERESTS

Programming Languages:	C++, Java, Python, SQL
Technologies/Frameworks:	Spring boot, Langchain, RAG, LLM, Distributed Systems, Microservices, REST APIs, Grafana, Node.js, React.js
Databases:	MySQL, Oracle DB, Firebase, Mongo DB
Cloud/Tools:	Oracle Cloud Infrastructure (OCI), Codex
Relevant Coursework:	Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems

ACHIEVEMENTS

- **Knight @Leetcode** (max Rating 1949) (Top 3.3%)
- **Specialist @Codeforces** (max Rating 1449)
- Achieved global rank of **53** in Leetcode contest in between 17000 contestants
- Achieved global rank of **95** in codechef contest.
